# NEW DEPARTURE BALL BEARINGS

**NEW DEPARTURE  
MANUFACTURING  
COMPANY** BRISTOL  
CONN.

A SPECIAL STEEL THAT ENDURES the merciless punishment of speed, stress and shock without perceptible wear—balls and raceways that defy imagination with their matchless perfection—these suggest the superlative quality of New Departure Ball Bearings. And they explain, too, why engineers select New Departures for long, hard service wherever the wear and waste of friction are to be eliminated to the last possible degree. For pure, rolling motion is frictionless and **NOTHING ROLLS LIKE A BALL**

# Millions of Tiny Barriers say—

## RUST SHALL NOT PASS

Why doesn't rust eat into Reading Genuine Puddled Wrought Iron Pipe, as it does into ordinary pipe? A microscope will tell you—and more than eighty years of experience will furnish the proof! For, throughout the structure of Reading 5-Point Pipe, millions of silicious barriers say "Stop" to corrosion.

**When you install** Reading 5-Point Pipe, you are sure that pipe maintenance costs will be *practically nothing* during the entire life of your building! Remember, too, that the initial cost of Reading 5-Point Pipe is only slightly higher than that of cheap, unsatisfactory pipe.

Puddling—the time-tested way of making the original, Genuine Puddled Wrought Iron—distributes this silicious element so uniformly that rust can't find a loophole. That's why it is important to insist on getting Reading Genuine Puddled Wrought Iron, known for generations. Our name and indented spiral mark protect you.

Forever Marks

*Science and Invention Have Never Found a Satisfactory Substitute for Genuine Puddled Wrought Iron*

## Flint wanted dependable lighting ... and got it

WHEN Mr. Consumer quits for the day, he wants to relax. If he's a radio fan, he wants freedom from line voltage fluctuation; if he reads, he wants steady light; if movies are his weakness, he wants them flickerless.

In Flint, Michigan... city of automobile manufacture... they have to relax. But they are wide awake on the subject of lighting.

They wanted dependable low-cost power for their lighting system, and they got it... with a modern Worthington 3-cylinder 4-cycle Diesel Engine direct-connected to an a. c. generator.

Now in its third year of service, this unit is rendering steady, dependable service... representative of the performance promised for and delivered by every Worthington Diesel Engine. Write for information on this type of equipment.

*Elevation of the G-E vertical compound turbine-generator*

## Learning the Latest Word in Turbine Construction

An important departure in apparatus engineering is the General Electric vertical compound turbine-generator. In this machine, the high-pressure element, heretofore separate, is built on top of the low-pressure generator.

This compact construction does away with the necessity for building a separate foundation for the high-pressure unit, permits the use of one set of air coolers, requires less piping, and conserves floor space.

Test men—veterans, as well as more recent graduates of engineering colleges—take charge of the machine after assembly, test for oil leaks, bring it up to speed and check balance in the initial run, and set the emergency and operating governors. Electrical tests follow after the generators are coupled on. This work is part of the training program for general, industrial, sales, or advanced engineering work with the General Electric Company.
